Research Analyst, Office of Analytics & Institutional Effectiveness, Virginia Polytechnic Institute and State University

Rodney Myers

Instructional Consultant, School of Education, Indiana University Bloomington

Summary

We discovered in late 2020 that Google Analytics 4 (GA4) has effectively implemented many ideas from Analysis of Patterns in Time (APT). GA4 tracking sessions can be treated as APT temporal maps. If used creatively, GA4 reporting tools can be used to count patterns needed for APT. We demonstrate that APT is a form of innovative learning analytics. Google Analytics 4 can be leveraged to do APT when supplemented with spreadsheet calculations.

Overview

- Serendipitous discovery in Feb. 2020 that Google Analytics might be adapted to do some parts of Analysis of Patterns in Time (APT)
 - *APT invented in the 1970s*
 - *Google Analytics started in 2005 after purchase of two companies: Urchin (on Demand) and Adaptive Path (Measure Map)*
- Unplanned book emerged about this discovery during COVID pandemic (Frick et al., 2022)
- Fundamentals of APT: temporal maps and APT queries
- Illustration of how to do APT with Universal Analytics and Google Analytics 4

Backstory

- Ted was homebound during COVID emergence in late Feb. 2020
- Was doing routine check on use of the online Indiana University Plagiarism Tutorials and Tests (IPTAT)
- Using Google Analytics (GA) for generating reports on IPTAT usage
- Exploring 'admin' tools in GA
- Found an 'admin' tool for segmenting users according to matching conditions
- Realized that segmenting of users when combined with further searches of file name matches with the GA Behavior analysis tool could result in counts of temporal events needed for APT
- Eureka! We have Big Data on years of IPTAT usage by millions of users. Google software engineers had built a data collection platform and analysis tools that might be used for APT! Who knew? How far could we push GA to do APT?

What is Analysis of Patterns in Time (APT)?

- APT is a research methodology invented by Frick in 1970s
- APT is an alternative to the linear models approach (LMA—e.g., multiple regression, ANOVA): In the 1970s
 - *LMA was the prevalent quantitative approach to educational research*
 - *Qualitative methods were rarely used in educational research*
- APT draws from general systems theory, information theory, set theory, probability theory, and Bayesian reasoning
- **Temporal maps** are created as the main source of data for APT
- APT queries are then used to segment temporal maps for matching conditions, and for counting occurrences of temporal patterns
- APT queries result in probabilistic measures of temporal patterns (likelihoods, odds, cumulative time)

New Book Rapidly Emerged in 2020

- Ted was at risk for COVID due to age
- Afraid that this discovery might get lost if he got sick or died from COVID
- Started writing extensive notes about this discovery and how to adapt GA to do APT, when coupled with Excel spreadsheets
- Shared ideas with colleagues who had previously worked on research teams in IST at IU using APT methods in their research:
 - *Rod Myers*
 - *Cesur Dagli*
 - *Andrew Barrett*
 - *and a few other close colleagues*

New Book: Big Study over 2 years, 2019-2020

- Approximately 936,000 learning journeys, students from 222 countries and territories worldwide
- About 1.9M temporal maps, 36M pageviews
- Google Analytics for tracking student use of IPTAT website
- Discovered in 2020 that Universal Analytics (UA) could be leveraged to do Analysis of Patterns in Time (APT) when coupled with Excel spreadsheets
- Main APT finding: Successful students viewed 3 to 4 times as many unique Web pages designed with First Principles of Instruction as did unsuccessful students.

ROUTLEDGE FOCUS

INNOVATIVE LEARNING ANALYTICS FOR EVALUATING INSTRUCTION

A Big Data Roadmap to
Effective Online Learning

Theodore W. Frick, Rodney D. Myers,
Cesur Dagli and Andrew F. Barrett

GOOGLE ANALYTICS 4

Introduced in Mid-October, 2020

Main Research Question: Follow-up Study to the Big Study*

Can Google Analytics 4 (GA4) be used to do Analysis of Patterns in Time (APT)? If so, how?

**Note: We used GA Universal Analytics (UA) in the Big Study, 2019 - 2020*

In the Big Study we investigated IPTAT learning journeys with APT

- Indiana University Plagiarism Tutorials and Tests (IPTAT) online: <https://plagiarism.iu.edu>
- Redesigned IPTAT in 2015 using First Principles of Instruction (FPI)
- Evaluated the effectiveness of FPI

First Principles of Instruction (FPI): Merrill, 2002, 2013, 2020

1. ***Authentic problems or tasks*** for students to do, arranged from simple to complex (e.g., <https://plagiarism.iu.edu/tutorials/index.html>);
2. ***Activation*** of student learning by helping students connect new learning with what they already know or believe (e.g., <https://plagiarism.iu.edu/tutorials/task1/activation.html>);
3. ***Demonstration*** of what is to be learned, by showing a variety of examples (e.g., <https://plagiarism.iu.edu/tutorials/task1/demonstration.html>);
4. ***Application*** of what is being learned, so students can try themselves and feedback is provided (e.g., <https://plagiarism.iu.edu/practiceTest.php?task=1&item=1>); and
5. ***Integration*** of what has been learned into students' own lives (e.g., <https://plagiarism.iu.edu/tutorials/task1/integration.html>).

IPTAT TUTORIALS DESIGN IN 2015

Basic Level: Recognize the basic difference between:

- *avoiding* plagiarism, and
- *committing* plagiarism.

Novice Level: When *one source is used*, recognize a proper quotation from an improper quotation:

- a *proper quotation* of someone else's words, and
- provision of the appropriate citation and reference.

Intermediate Level: When *one source is used*, recognize a proper paraphrase from an improper paraphrase:

- a *proper paraphrase* of someone else's words, and
- provision of the appropriate citation and reference.

Advanced Level: When *one source is used*, recognize various combinations of:

- *proper/improper paraphrasing*, and
- *proper/improper quotations*.

Expert Level: Put it all together. When *two or more sources are used*, recognize various combinations of:

- *proper/improper paraphrasing*, and
- *proper/improper quotations*.

Apply First Principle #1:
sequence *authentic tasks*
from simple to complex

IPTAT Design Example

Apply the FPI Activation principle

STRUCTURE: IPTAT TUTORIALS DESIGN IN 2015

To do APT, we need to create temporal maps of coded event occurrences

- Each *temporal map* is basically a spreadsheet or table for characterizing a unique case or situation
- Each map row consists of a date/time stamp and *coding* of one or more event occurrences at that time
 - *Each classification consists of two or more mutually exclusive categories which are used to code events*
 - *Multiple classifications can be used, one for each column*
- Each new row represents the sequential order through time in which those coded events occurred

Sam's Case

An Example of Sam's Learning Journey through IPTAT on Tues., Oct. 6, 2020

How to Recognize Plagiarism: Tutorials and Tests

Welcome to the Indiana University Plagiarism Tutorials and Tests

Learn how to recognize plagiarism, test your understanding, and earn a certificate.

To begin, watch this brief video of a teacher meeting with a student who has committed plagiarism. Click on the one-minute video below.

Video too slow? [Click here](#) for lower quality video.

Why is it important to avoid plagiarism?

The academic community highly values the acknowledgment of contributions to knowledge. When you properly acknowledge the contributions to knowledge made by other people, you are showing respect for their work. You are giving credit where credit is due. You are not misleading the reader to believe that your ideas and words are solely your own.

FPI: First Principle
of Instruction

SUMMARY

Summary: Analysis of Patterns in Time

- APT is a fruitful methodology for investigating the instrumental value of instruction to promote student learning achievement.
- GA4 when supplemented with Excel can do some kinds of APT as envisioned originally by Frick (1983, 1990) and Myers and Frick (2015).
- GA4 is somewhat easier to use for doing APT when compared with Google's earlier Universal Analytics. In both cases, Excel is needed for further computations of likelihoods and Bayesian analysis.
- For more on APT and designing online instruction with First Principles of Instruction, see our new book: [*Innovative Learning Analytics for Evaluating Instruction: A Big Data Roadmap for Effective Online Learning*](#) (2022, Routledge Focus Series)
